SOFTWARE ENGINEERING PROJECTS

Squid Game - Red Light Green Light

General Assembly Project - 2021

Squid Game is a real-time multiplayer race for survival game. Created using Node.js, JavaScript, socket.io, HTML and CSS. Despite websockets not being covered in the curriculum I had a clear goal of what i wanted to create so i committed to independently learn something new.

Tic Tac Fighter

General Assembly Project - 2021

Tic Tac Fighter is a version of the popular naughts and crosses game created into my third week at General Assembly. Built using CSS, JavaScript and HTML.

Game Night

General Assembly Project - 2021

Game Night is an online scattergories game created in a team of 4 people using Node.js. Using the skills we had learnt so far we implemented a database able to connect players together according to the game names and added custom features to add more categories to your games.

WORK EXPERIENCE

ONCALL Group

Disability Support Worker 2019 - 2020

As a disability support staff, I assisted clients to achieve their own individual goals and needs to help them become more independent.

- Administration of medication according to client profiles with Webster Paks, emergency first aid and CAM's.
- Managed risk associated with manual handling tasks, mobility and transportation of clients.
- Physiotherapy, speech and cognitive stimulation therapy.
- Infection Control for COVID safe practices.

Jelly Beans

Logistics Manager - 2009 - 2018

Jelly Beans was a kids wholesale clothing company selling to several boutiques nationwide across Australia.

- Managed teams for stock dispatch and relocation.
- Built a business website using WordPress and HTML/CSS.
- Managed email management system, domain and hosting.
- Updated accounts database and BAS statements with MYOB.

EDUCATIONAL HISTORY

Software Engineering Immersive

General Assembly Australia

Aug 2020 - Oct 2020
